

## PROJECT: EL DORADO STREET STORM SEWER IMPROVEMENT

**General  
Description:**

The El Dorado Street Storm Sewer Improvement project is located in Alviso along El Dorado Street between Elizabeth and Moffat Streets. The work will include the installation of approximately 703 linear feet of storm drain pipe, inlets, sidewalk, curb & gutter, and wheelchair ramps.

The existing storm drainage system in this area does not satisfactorily accommodate the volume of local storm water runoff. This results in roadway ponding at various locations within the project limits. The implementation of this project will improve drainage, minimize the negative affects associated with standing water on the street, and improve accessibility for residents of Alviso.

**Cost:** \$583,000 Construction (Estimate)

<b>Schedule:</b>	April 2011	100% Plans and Specification
	June 2011	Estimated Award of Contract
	August 2011	Estimated Start of Construction
	October 2011	Estimated Beneficial Use

**Project Quick Facts**

- Approx. 3,800 sf of sidewalk & driveway
- Approx. 861 lf of curb and gutter
- 4 new ADA compliant curb ramps
- Approx. 703 lf of storm pipe
